OSUOLALE QUYUM

Software Developer | AI-Powered Applications & Automation

Oyo State, Nigeria | kelightsub@gmail.com | github.com/koredeve | linkedin.com/in/osuolale-quyum-068209133 | koredeve.github.io

PROFESSIONAL SUMMARY

Early-career software developer who turns ideas into practical web applications, automation workflows, and API-integrated tools. Uses AI-assisted development to explore and accelerate implementation while reviewing code, debugging behaviour, and validating what the software actually does.

EDUCATION

B.Sc. Pure & Applied Mathematics, Second Class Upper | 2021-2025
Ladoke Akintola University of Technology (LAUTECH), Ogbomoso, Nigeria

EXPERIENCE

Independent Software Development | 2024-Present
Built and iterated on web applications, mathematical utilities, and automation workflows using Python and JavaScript. Explored milestone-based escrow and grant prototypes with Python GenVM contracts and React interfaces. Created a local video-processing workflow with Python, FFmpeg, and the YouTube Data API.

SQI College of ICT - Industrial Training Intern | 2024
Developed responsive interfaces with semantic HTML, CSS, and JavaScript; applied DOM manipulation and cross-browser debugging; collaborated with peers on technical problem-solving and project delivery.

SELECTED PROJECTS

DeltaPerp
Browser calculator for estimating cash-and-carry yields from funding, borrow-cost, and spot-price inputs. Uses deterministic formulas; figures should be independently checked before any trading decision. deltaperp.ai.studio

MathSolverBot
Conversational maths interface that formats step-by-step explanations through an external language-model service. github.com/koredeve/math-solver

WorkProof
Experimental freelance-escrow prototype exploring milestone releases and deliverable evaluation on GenLayer testnet. Built with Python GenVM contract logic and a React/Vite frontend. github.com/koredeve/workproof

ImpactVault
Experimental milestone-gated grant and crowdfunding prototype with GenLayer contracts and a React interface; not presented as a production financial service. github.com/koredeve/impact-vault

YouTube Automation Engine
Local Python workflow for repeatable video rendering and scheduling using FFmpeg and the YouTube Data API. No public demo.

TECHNICAL SKILLS

Languages: Python, JavaScript, HTML, CSS
Application work: API integration, automation, AI-assisted implementation, GenLayer/GenVM experimentation
Frontend: React, Next.js, Vite, Tailwind CSS
Tools: Git, GitHub, Vercel, FFmpeg, REST APIs
