---

PROFESSIONAL SUMMARY

Mathematics graduate and software engineer specializing in AI-driven applications, automation workflows, and intelligent Web3 systems. Strong technical foundation in Python, JavaScript/TypeScript, LLM integration, and algorithmic problem-solving with practical experience building functional prototypes, developer tools, and verified decentralized protocols.

EDUCATION

B.Sc. Pure & Applied Mathematics, Second Class Upper *2021 – 2025*

Ladoke Akintola University of Technology (LAUTECH) · Ogbomoso, Nigeria

EXPERIENCE

Independent Software & AI Development *2024 – Present*

- Designed and developed interactive AI-powered applications, mathematical solvers, and arbitrage analysis tools
- Built decentralized escrow and governance protocols on GenLayer using Python GenVM intelligent contracts
- Implemented multi-model LLM vision and reasoning pipelines (Claude 3.5 Sonnet, GPT-4o, DeepSeek) via OpenRouter and Google AI Studio
- Constructed automated content processing workflows in Python using FFmpeg, YouTube API v3, and scheduled execution
- Built responsive, accessible web interfaces and state machines using Next.js, React, and Vite

SQI College of ICT — Industrial Training Intern *2024*

- Developed responsive web interfaces using semantic HTML5, CSS3, and modern JavaScript
- Applied frontend engineering principles, DOM manipulation techniques, and cross-browser debugging
- Collaborated with peers on technical problem-solving, code reviews, and software project delivery

PROJECTS

ImpactVault Protocol *impact-vault-tau.vercel.app · github.com/koredeve/impact-vault*

- Milestone-gated DAO grant and crowdfunding protocol built on GenLayer Intelligent Contracts
- Tranche fund releases gated on verified deliverable criteria with pro-rata contributor refund protection
- Full-stack Web3 DApp with browser wallet injection (MetaMask/Rabby), EIP-3085 network switching, and 13 unit tests

WorkProof Protocol *workproof-gamma.vercel.app · github.com/koredeve/workproof*

- Trustless freelance work verification and milestone settlement protocol on GenLayer
- Automated consensus validation scoring acceptance criteria before escrow releases
- Integrated EIP-6963 multi-wallet connector, state machine contracts in Python GenVM, and 44-test verification suite

SignalAI Chart Analysis Engine *signalai-kappa.vercel.app · github.com/koredeve/SignalAi*

- Multi-model vision analysis platform comparing financial chart setups across Claude 3.5 Sonnet, GPT-4o, and DeepSeek
- Orchestrates multi-model prompts, extracts structured technical bias, and renders comparative candlestick analysis

DeltaPerp Arbitrage Terminal *deltaperp.ai.studio*

- Perpetual DEX funding rate & basis arbitrage scanner and net cash-and-carry yield calculator
- Implements deterministic formulas factoring in borrow costs, funding cycles, and delta-neutral execution playbooks

FORGE Suite (Him & Her) *forgehim.vercel.app · github.com/koredeve/forge-fitness*

- Calisthenics and targeted biomechanics progressive training platforms built on Next.js & React
- Features guided workout players, interactive exercise skill trees, and custom routine builders

YouTube Automation Engine *Python & Automation CLI*

- Autonomous multi-channel publishing system handling content scheduling, batch media rendering, and scheduled deployment in Python using FFmpeg and YouTube API v3

MathSolverBot & Car LandedIQ *mathsolverbot.vercel.app · github.com/koredeve/math-solver*

- Conversational mathematics solver providing step-by-step reasoning via OpenRouter API, Marked.js, and MathJax
- Nigerian customs duty landed cost bidding calculator with real tariff formulas

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, HTML5, CSS3

AI & Smart Contracts: GenLayer Intelligent Contracts (Python GenVM), LLM Integration (OpenRouter, Claude API, GPT-4o), Google AI Studio, Multi-Model Vision

Frontend & Frameworks: Next.js, React, Vite, Tailwind CSS, Canvas API, Web Audio API
Tools & Infrastructure: Git, GitHub Actions, Docker, Vercel, Firebase, FFmpeg, REST APIs
